(Abstract available)

DESCRIPTORS: *Thermoplastics, Material forming,
*Molding, Injection.

A series of studies and practical suggestions on
injection molding of thermoplastic materials is
presented. The different factors governing molding
and determining in each case the best conditions for
utilizing the equipment are examined in detail. In
order to locate the problem accurately, the mechanism
of injection is briefly summarized. (Author)

viscose fiber brought about by vulcanization was
studied. The nature of chemical action of Velans and
synthesized vulcanizing agents was investigated.

Heat transfer.

Generalized criteria are proposed that are a function
of chemical, mechanical, and thermodynamical
properties of substances and of conditions of mechani-
cal influence. The theory of thermal explosion and the
thesis concerning the part of pressure on the initiation
of the explosion are assumed which were stated
